

# Package ‘datrProfile’

July 22, 2025

**Type** Package

**Title** Column Profile for Tables and Datasets

**Version** 0.1.0

**Description** Profiles datasets (collecting statistics and informative summaries about that data) on data frames and 'ODBC' tables: maximum, minimum, mean, standard deviation, nulls, distinct values, data patterns, data/format frequencies.

**License** GPL-3 | file LICENSE

**URL** <https://github.com/avitaliano/datrProfile>

**BugReports** <https://github.com/avitaliano/datrProfile/issues>

**Encoding** UTF-8

**LazyData** true

**Suggests** testthat

**Imports** odbc, dplyr, RSQLite

**RoxygenNote** 6.1.1

**NeedsCompilation** no

**Author** Arnaldo Vitaliano [aut, cre]

**Maintainer** Arnaldo Vitaliano <[vitaliano@gmail.com](mailto:vitaliano@gmail.com)>

**Repository** CRAN

**Date/Publication** 2019-08-02 09:20:05 UTC

## Contents

buildQueryColumnFrequency . . . . .	2
buildQueryColumnMetadata . . . . .	2
buildQueryColumnStats . . . . .	3
buildQueryColumnStats.sqlite . . . . .	3
buildQueryCountNull . . . . .	4
buildQueryCountTotal . . . . .	5
buildQueryProfileColumnFormatFrequency . . . . .	5

closeConnection . . . . .	6
connectDB . . . . .	6
connectDB.default . . . . .	7
connectDB.sqlite . . . . .	7
getTableColumns . . . . .	8
prepareConnection . . . . .	8
print.profile . . . . .	9
profileColumn . . . . .	9
profileColumnFormat . . . . .	10
runProfile . . . . .	11
summary.profile . . . . .	11

**Index** **13**

buildQueryColumnFrequency  
*buildQueryColumnFrequency*

**Description**

buildQueryColumnFrequency

**Usage**

buildQueryColumnFrequency(conn.info, ...)

**Arguments**

conn.info	Connection info created with <a href="#">prepareConnection</a>
...	Other parameters

**Value**

query column, count(\*) from table

buildQueryColumnMetadata  
*buildQueryColumnMetadata*

**Description**

buildQueryColumnMetadata

**Usage**

buildQueryColumnMetadata(conn.info, ...)

**Arguments**

conn.info      Connection info created with [prepareConnection](#)  
...              Other params

**Value**

query columns' metadata

---

`buildQueryColumnStats`   *buildQueryColumnStats*

---

**Description**

`buildQueryColumnStats`

**Usage**

```
buildQueryColumnStats(conn.info, ...)
```

**Arguments**

conn.info      Connection info created with [prepareConnection](#)  
...              Other parameters

**Value**

query count(distinct column) from table

---

`buildQueryColumnStats.sqlite`  
*buildQueryColumnStats.sqlite*

---

**Description**

`buildQueryColumnStats.sqlite`

**Usage**

```
## S3 method for class 'sqlite'  
buildQueryColumnStats(conn.info, schema, table, column,  
  query.filter, ...)
```

**Arguments**

<code>conn.info</code>	Connection info created with <a href="#">prepareConnection</a>
<code>schema</code>	Table Schema
<code>table</code>	Table Name
<code>column</code>	Column profiled
<code>query.filter</code>	Filter applied to the profile
<code>...</code>	Other parameters

**Value**

query count(distinct column) from table

---

`buildQueryCountNull`    *buildQueryCountNull*

---

**Description**

`buildQueryCountNull`

**Usage**

`buildQueryCountNull(conn.info, ...)`

**Arguments**

<code>conn.info</code>	Connection info created with <a href="#">prepareConnection</a>
<code>...</code>	Other parameters

**Value**

query select count(\*) where collumn is null

---

`buildQueryCountTotal`    *buildQueryCountTotal*

---

**Description**

Count total rows from table.

**Usage**

`buildQueryCountTotal(conn.info, ...)`

**Arguments**

<code>conn.info</code>	Connection info created with <a href="#">prepareConnection</a>
<code>...</code>	Other params

**Value**

query count(\*) from table

---

`buildQueryProfileColumnFormatFrequency`  
*buildQueryProfileColumnFormatFrequency*

---

**Description**

`buildQueryProfileColumnFormatFrequency`

**Usage**

`buildQueryProfileColumnFormatFrequency(conn.info, ...)`

**Arguments**

<code>conn.info</code>	Connection info created with <a href="#">prepareConnection</a>
<code>...</code>	Other parameters

**Value**

queries column format frequency from table

closeConnection      *closeConnection*

---

**Description**

Disconnects from database using `odbc::dbDisconnect`

**Usage**

```
closeConnection(conn)
```

**Arguments**

`conn`              Connection created at [connectDB](#)

**Value**

TRUE if succeeded at closing connection

---

connectDB              *connectDB*

---

**Description**

Connects to database using [dbConnect](#)

**Usage**

```
connectDB(conn.info, ...)
```

**Arguments**

`conn.info`          Connection info created at [prepareConnection](#)  
`...`                  Other parameters

**Value**

connection to database

---

connectDB.default	<i>connectDB.default</i>
-------------------	--------------------------

---

**Description**

Connects to database using [dbConnect](#)

**Usage**

```
## Default S3 method:  
connectDB(conn.info, ...)
```

**Arguments**

conn.info	Connection info created at <a href="#">prepareConnection</a>
...	Other parameters

**Value**

connection to database

---

connectDB.sqlite	<i>connectDB.sqlite</i>
------------------	-------------------------

---

**Description**

Connects to database using [dbConnect](#)

**Usage**

```
## S3 method for class 'sqlite'  
connectDB(conn.info, ...)
```

**Arguments**

conn.info	Connection info created at <a href="#">prepareConnection</a>
...	Other parameters

**Value**

connection to database

---

getTableColumns	<i>getTableColumns</i>
-----------------	------------------------

---

### Description

Issues query against the RDBS to retrieve information about each column of the table. Name, type, length, precision, etc.

### Usage

```
getTableColumns(conn.info, schema, table)
```

### Arguments

conn.info	Connection info created with <a href="#">prepareConnection</a>
schema	Table schema
table	Table name

### Value

data frame containing the columns' metadata

---

prepareConnection	<i>Prepares connection to RDBS via ODBC</i>
-------------------	---

---

### Description

prepareConnection list connection details needed to connect to a RDBS using ODBC

### Usage

```
prepareConnection(db.vendor, odbc.driver = odbc::odbc(),
  db.host = NULL, db.name = NULL, db.encoding = "", dsn = NULL,
  user = NULL, passwd = NULL)
```

### Arguments

db.vendor	Database vendor (teradata, sqlserver)
odbc.driver	ODBC driver used to connect to database
db.host	Database hostname
db.name	Database name
db.encoding	Database encoding
dsn	Data source name
user	Username to connect to database
passwd	Password to connect to database

**Examples**

```
conn.info <- prepareConnection(db.vendor = "teradata",  
  dsn = "ODBC_MYDB", user = "myuser", passwd = "mypasswd")
```

---

print.profile	<i>Print method</i>
---------------	---------------------

---

**Description**

Print method

**Usage**

```
## S3 method for class 'profile'  
print(x, ...)
```

**Arguments**

x	profile object
...	other parameters

**Value**

printed profile

---

profileColumn	<i>profileColumn</i>
---------------	----------------------

---

**Description**

profileColumn

**Usage**

```
profileColumn(conn.info, schema, table, column, column.datatype,  
  query.filter, limit.freq.values = 30, format.show.percentage)
```

**Arguments**

conn.info	Connection info created with <a href="#">prepareConnection</a>
schema	Table schema
table	Table name
column	Column being profiled
column.datatype	Column datatype
query.filter	Filter applied before profile the column
limit.freq.values	Distinct values shown in frequency data frame
format.show.percentage	Threshold considered when showing formats' percentages

**Value**

```
columnProfile <- list(column, count.total, count.distinct, perc.distinct, count.null, perc.null, min.value,
max.value, column.freq, format.freq = format.freq)
```

---

```
profileColumnFormat  profileColumnFormat
```

---

**Description**

Profiles column based on its format, using masking strategy. X = char, 9 = digit, S = symbol

**Usage**

```
profileColumnFormat(conn.info, column, column.datatype, schema, table,
count.total, query.filter, format.show.percentage)
```

**Arguments**

conn.info	Connection info created with <a href="#">prepareConnection</a>
column	Column name that will be profiled
column.datatype	Column datatype
schema	Table schema
table	Table name
count.total	Number of rows to be profiled
query.filter	Filter applied to the table, when profiling
format.show.percentage	Threshold considered when showing formats' percentages

**Value**

Data Frame containing columns' metadata

---

runProfile	<i>Profile all columns from ODBC table or dataframe</i>
------------	---

---

**Description**

Profiles tables and dataframes (collecting statistics and informative summaries about that data): max, min, avg, sd, nulls, distinct values, data patterns, data/format frequencies.

**Usage**

```
runProfile(conn.info, schema = NULL, table, is.parallel = TRUE,
           count.nodes, query.filter = NA, format.show.percentage = 0.03)
```

**Arguments**

conn.info	Connection info created with <a href="#">prepareConnection</a>
schema	Table schema
table	Table name
is.parallel	Boolean that indicates if profile will run in parallel. Default TRUE.
count.nodes	Number of nodes used when is.parallel = TRUE
query.filter	Filter applied to the table, when profiling
format.show.percentage	Threshold considered when showing formats percentages

**Value**

profile results for the table/dataframe

---

summary.profile	<i>Override summary function</i>
-----------------	----------------------------------

---

**Description**

Override summary function

**Usage**

```
## S3 method for class 'profile'
summary(object, ...)
```

**Arguments**

object	Profile object
...	other parameters

**Value**

data.frame with summary information
