Model showcase

Questions

I ...

- studied Landscape Ecology and Ecology (Greifswald and Potsdam, Germany)
- have knowledge in plant ecology (plants & bryophytes), simulation modelling and in (Bayesian) statistics
- am a doctoral student at the FU Berlin
- teach statistics with R, individual-based modelling, and a botany & ecology module

Github: [felixnoessler](#), E-Mail: felix.noessler@fu-berlin.de

Introduction

Research questions

Modelling concept

Overview

Study site

Species-specific response

Model parametrisation

Traits

Model showcase

Questions

- How can the taxonomic and functional diversity of plants in grasslands be promoted and, at the same time, the loss of yield (forage production) be minimised?

Species-specific response

Model parametrisation

Traits

Model showcase

Questions

- How can the taxonomic and functional diversity of plants in grasslands be promoted and, at the same time, the loss of yield (forage production) be minimised?
- Does a higher functional plant diversity lead to a higher temporal stability of the forage production?

Plant species richness and biomass production

Model
showcase

Questions

Model overview

- community model of grassland plant species
- implementation with difference equations

Model overview

- community model of grassland plant species
- implementation with difference equations
- temporal resolution: daily
- spatial resolution: per grassland (patch)

Questions

Model overview

- community model of grassland plant species
- implementation with difference equations
- temporal resolution: daily
- spatial resolution: per grassland (patch)

State variables

- biomass of species
- soil water content

Traits

- Specific leaf area
- Plant height
- Root surface area / aboveground biomass
- Mycorrhizal colonisation
- Leaf nitrogen content

Species-specific response - Plant traits

Introduction

Research questions

Modelling concept

Overview

Study site

Species-specific
response

Model parametrisation

Traits

Model showcase

Questions

Radiation use efficiency

- Specific leaf area \uparrow
- Plant height \uparrow

Water and nutrient use efficiency

- Specific leaf area \downarrow
- Root surface area / aboveground biomass \uparrow
- Mycorrhizal colonisation \uparrow

Species-specific response - Plant traits

Introduction

Research questions

Modelling concept

Overview

Study site

Species-specific
response

Model parametrisation

Traits

Model showcase

Questions

Radiation use efficiency

- Specific leaf area ↑
- Plant height ↑

Water and nutrient use efficiency

- Specific leaf area ↓
- Root surface area / aboveground biomass ↑
- Mycorrhizal colonisation ↑

Senescence rate

- Specific leaf area ↓

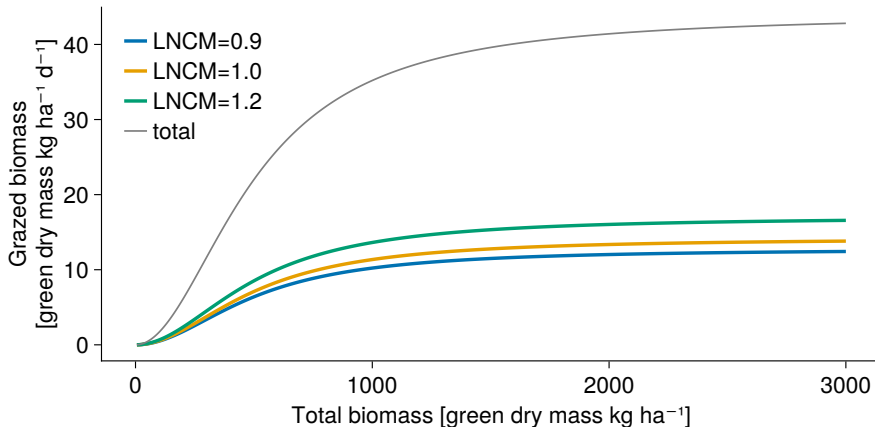

Grazing and trampling

- Leaf nitrogen content ↓
- Plant height ↓

Mowing

- Plant height ↓

Species-specific response - Example

Model parametrisation and Scenarios

Introduction

Research questions

Modelling concept

Overview

Study site

Species-specific
response

Model parametrisation

Traits

Model showcase

Questions

for fitting internal parameters:

- input: observed time series of climatic and management variables (2006/2009 - 2021/2022)

Model parametrisation and Scenarios

Species-specific
response

Model parametrisation

Traits

Model showcase

Questions

for fitting internal parameters:

- input: observed time series of climatic and management variables (2006/2009 - 2021/2022)
- output: biomass, trait mean, trait variance, and soil moisture
- initialisation: equal biomass among generated species

for running scenarios:

- random samples from fitted time series models of the climate data
- management options can be varied

Plant traits - Gaussian mixture model

Introduction

Research questions

Modelling concept

Overview

Study site

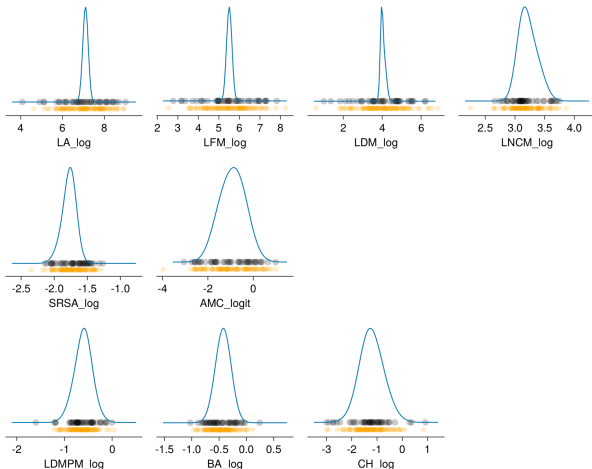

Species-specific
response

Model parametrisation

Traits

Model showcase

Questions

- 46 species with values for all traits (out of 138 of the three exploratories)
- Gaussian mixture model with full covariance matrix and transformed data
 - black: data
 - orange: generated samples
 - blue line: marginal likelihood

Plant traits - Gaussian mixture model
